

SMB Threat Data Feeds

Add a dependable layer of protection against malware and ransomware infections.

Malware Patrol has specialized in malware and ransomware for more than a decade. Our special SMB Threat Data package contains URLs and domains used to host malware, ransomware, command and control servers and DGAs. Formatted for integration with the most common anti-virus software and threat intelligence platforms, it is ideal for MSPs, ISPs and other small to medium businesses (SMBs) responsible for the security of their customers' e-mail servers, networks and end users.

These are some of the malware families tracked by Malware Patrol:

| | | | |
|-------------|------------|----------|---------------|
| Alina | China.z | Istealer | Optima |
| Andromeda | Citadel | Jackpos | Pony |
| Athena | Cryptowall | Kazy | Solar |
